## Anti Graffiti Coatings

### Wax Based

Can be used on all outdoor masonry surfaces where a sacrificial invisible protection (up to 10 years) is required. Coating is a permeable (allows the surfaces to breathe) and fully reversible water based crystalline micro wax coating suitable for all masonry surfaces and most porous surfaces. Helps prevent penetration of atmospheric pollutants into the substrate and eases subsequent cleaning. It is available as regular and ES (extra strong) for porous concrete, stone and painted surfaces.

### Advantages

- Invisible coating – does not change the nature or natural colour of the substrate
- Permeable – allows the substrate to breathe
- Long lasting protection
- Easy graffiti removal, simply using hot water under moderate pressure
- Silicone free
- Can be applied during manufacture or insitu concrete
- Reversible with hot water
- Completely biodegradable

### Disadvantages

- May dull polished and gloss surfaces
- Not suitable for horizontal surfaces
- Has associated cost

### Acrylic Based

A one component, moisture cured polyurethane coating. This high performance, solvent free coating provides a clear matt and hard scratch resistant finish, with high resistance to chemicals and graffiti. Can also be used as a hygiene coating, and as a general protective coating suitable for most substrates.

Must first be primed with a high grade acrylic. This combination will minimise, but not eliminate, aesthetic change on masonry substrates.

### Advantages

- Normally only a one coat application
- One pack product, no on site mixing
- Cost effective
- Not suitable for application over paints containing silicon or teflon
- Will change the appearance of some substrates
- Certain types of graffiti marker may penetrate the coating thus full removal may not be possible.

### Limitations

- Not suitable for some thermoplastic materials
