DELIVERY INFORMATION

All prices quoted by Bespoke Concrete Products are for standard delivery only (unless otherwise specifically stated). Standard delivery is not time specific, assumes unrestricted site access and does not include any offloading. The customer will need to organise their own offloading of the units.

If the consignment will have 5 or fewer pallets each weighing under 1 tonne then we can offer the client a tail drop delivery. This simply means that the pallets will be dropped to ground level/kerbside. The customer will still need to arrange their own movement of the pallets from the kerbside.

Standard deliveries are not time specific and are generally made anywhere between 8.00 am and 6.00 pm. If required we can add a note on the system requesting for a site contact to be informed 1-2 hours before delivery but we cannot accept any responsibility if this request is not actioned by the delivery company.

Timed deliveries can be arranged at an additional cost.

If required we can offer a deliver with a HIAB (in-built crane on wagon). However, this would be quoted on an individual delivery basis and would depend on the quantity and weight of the units being delivered and where they were being delivered to. As a general rule for HIAB the maximum amount of pallets is 10 and the maximum weight is 10 tonne.

For large deliveries which will be made on 15T or more flatbed or curtainsider wagon, no offloading is available. The customer would have to organise their own fork truck or similar to offload the units. The maximum amount of pallets permitted on a flatback is 22 nr and the maximum weight is 28 tonne.

For all deliveries it's worth noting the weight of the units and each of the pallets to make sure the customer has the means to move/install as required.

Generally speaking standard pallets are 1.0 x 1.2 and can hold a maximum of 1 tonne. Specialist pallets holding up to 2 tonne can be made available if requested at an additional cost.

Maximum weight for a trail drop delivery is 1 tonne per pallet.

Maximum number of pallets for a full wagon is 22.

Maximum weight for a wagon is 28 tonne.

Maximum number of pallets for a HIAB is generally 10 (occasionally 12 by special request)

Maximum weight of complete load for a HIAB is generally 10 tonne.

If you would like to arrange your own haulier to collect and deliver the units please let us know and we will give you the information required in regard to number of pallets and weights.
